ElectricSense         Touchstone Energy* Cooperatives       2021 TOUCHSTONE ENERGY® HOME PROGRAM CHECKLIST Dairyland Power Cooperative System Only				
		This institution is an equal opportunity provider. Requirement	Check one checkbox for each requirement below	
Requirement Category	Requirement Detail	NOTE: If applying for the New Home incentive under the TOUCHSTONE ENERGY® HOME Program, all of the following requirements MUST be met, unless not applicable. For example, if a home does not have skylights, "Not Applicable" is acceptable. You may also qualify for the New Home incentive if you meet another program or code. See the 2021 Energy Efficiency Incentive Form for details.	Meets Requirement	Not Applicable
Foundation	Basement wall	R-15. R-20 if more than half the insulation is on the interior of the mass wall. <i>If structure does not have a basement, check "Not Applicable".</i>		
	Crawlspace wall	R-15. R-20 if more than half the insulation is on the interior of the mass wall. If structure does not have a crawlspace, check "Not Applicable".		
	Ground cover (under crawlspace)	6-Mil vapor barrier taped at all joints with 6" overlap. If structure does not have a crawlspace, check "Not Applicable".		
	Slab (if structure built on cement slab)	R-10 to depth of 4 ft. If structure not on cement slab, rather has a basement or crawlspace, check "Not Applicable".		
Insulation	Floor over crawlspace	R-30. If structure does not have a crawlspace, check "Not Applicable".		
	Ceilings without attic spaces	R-49. If insufficient space for R-49, then R-30, but is limited to 500 sq ft or 20% of insulated ceiling, whichever is less. If structure has an attic, check "Not Applicable".		
	Ceilings with attic spaces	R-49. Wherever full height of uncompressed insulation extends over the wall top plate at the eaves, R-38. <i>If structure does not have an attic, check "Not Applicable".</i>		
	Wood frame wall	R-20 cavity insulation + R-5 exterior insulation or R-13 cavity insulation + R-10 exterior insulation.		
	Knee walls	If the structure's frame wall is not made of wood, check "Not Applicable". If 6" knee wall, R-20 in cavity and R-5 outside of knee wall. If 3 1/2" knee wall, R-13 in cavity and R-10 outside of knee wall. If the structure does not have knee walls, check "Not Applicable".		
	Mass wall: poured concrete or log	R-15. R-20 if more than half the insulation is on the interior of the mass wall. If the structure does not have a mass wall made of concrete or log, check "Not Applicable".		
	Circulating hot water pipes	R-3 with manual off switch. If the structure does not have a hot water recirculation system, check "Not Applicable".		
	Mechanical system piping	R-3 if piping under 55 degrees Fahrenheit or over 105 degrees Fahrenheit. If piping 55 to 105 degrees Fahrenheit, check "Not Applicable".		
Windows/ Doors	Window/Glass	U-Factor 0.32 maximum or ENERGY STAR® labeled.		
	Skylight	U-Factor 0.55 maximum. If the structure does not have skylights, check "Not Applicable".		
	Doors	Metal insulated (exception for entry). Performance same as 2004 IECC: insulated metal U-0.6, wood U-0.5, insulated nonmetal edge, max 45% glazing, any glazing double pane U-0.35.		
Equipment	HVAC	Heat pump recommended & must be properly sized in accordance with ACCA Manual S, based on building loads calculated in accordance with ACCA Manual J or other approved methodologies. Gas furnaces (natural gas or propane) must be closed combustion, 90+ AFUE, & have ducted intake & exhaust. All HVAC systems must have temperature controls installed, including programmable thermostats if required.		
	Water Heater	Electric or heat pump recommended, or else closed combustion. Efficiency for electric = 0.88+ UEF. Efficiency for gas = .64+ UEF.		
	Appliances	Recommend ENERGY STAR® where applicable.		
	Can lights	Insulation contact rated and air tight. If the structure does not have can lights, check "Not Applicable".		
Exhaust	Exhaust systems	Outdoor air intakes and exhaust shall have automatic or gravity dampers that close when system is not operating. Sump pump basins should be sealed.		
	Attic ventilation	Vented with aperture = 1 sq ft per 300 sq ft ceiling area. Conditioned attics allowed. If structure does not have an attic, check "Not Applicable".		
	Kitchen & bath ventilation	Kitchen and bath ventilation must meet local or state codes.		
Ductwork & Air Infiltration Control (Skip "Ductwork	Duct work	Strongly recommend ductwork be located in conditioned area. If supply and return ductwork outside of thermal envelope, R-12 required. If supply and return ductwork in floor trusses outside of thermal envelope, R-10 required. Insulation can be in form of duct wrap or equivalent coverage with building insulation materials. Building cavities cannot be used as supply ducts. Ducts required to be sealed with mastic and mesh or U1-181a aluminum tape.		
& Air Infiltration Control"	House wrap	Required and must be installed per manufacturer's recommendation.		
requirements if blower door test performed & met requirement of < 3 air exchanges per hour at -50 Pascal.)	Sealing	Must seal: 1) Joints, seams & penetrations 2) Site-built windows, doors & skylights 3) Openings between window & door assemblies & respective jambs & framing 4) Utility penetrations 5) Dropped ceilings or chases adjacent to thermal envelope 6) Knee walls 7) Walls & ceilings separating a garage from conditioned spaces 8) Behind tubs & showers on exterior walls 9) Can lights & bath fan housings 10) Common walls between dwellings 11) Ducts, air handlers, filter boxes, & building cavities used as ducts 12) All other sources of infiltration.
